Associated With:

MARQ offers a non-sealing product settler with high performance in its small footprint. This compact machine incorporates controlled vibration principles to reduce overpack, allowing the case's top flaps to close without interference from the product.

Common applications for this type of equipment include fresh and frozen vegetables, frozen poultry pieces or french fries, powdered products and small plastic parts.

Available in lengths of 36" and 43", this equipment has a vibrator platter which assists in moving the filled case through the machine. Weights can be added or subtracted to increase/decrease vibration, and optional casters provide ease in moving the product settler from line to line.

This product settler features heavy-duty welded steel and a powder coated finish. As with all of MARQ's equipment, this non-sealing product settler is built to withstand the daily rigors of 24/7/365 operations.

Talk to a MARQ representative to see why this machine could work best for your application.

Standard Features

- Wiring practices conform to NFPA standards
- Operator friendly design
- Quick changeover
- Fully guarded
- Continuous feed hopper
- UL508A listed electrical panels
